

VALVES

Plasson valves have been in service in excess of 45 years in many demanding applications.

Proven Reliability: Safe control of water supplies for many years worldwide.

Robust Construction: The use of high quality materials and modern sealing systems yields long service life.

Comprehensive Solution: Many patterns of valves available for simple on/off or flow control, non-return and air release functions, as well as terminal fittings for hose connections.

Innovation: Quick Coupling connector for use with hoses, valves for electro-fused systems and flow control valves with seals for chemical applications.

Up to date Solutions: All brass stop valves are manufactured from the latest 'Green List' materials to comply with the impending material requirements of the EU to improve water quality and are suitable for underground use.

All valves on pg38 & pg39 are WRAS approved as primary stop valves. Valves for above & below ground use except 0341C & 3703 c/w drain, above ground installation only.
